

TEKNIKUM® Bird guard

APPLICATION

The Teknikum® Bird guard is used to protect the pole transformer's high voltage connector from short circuits caused by birds and other forest animals.

The Bird guard is made from durable, weather-resistant polypropylene (thermo-plastic). The Bird guard comes in set of three (3) in a box, including cable ties and installation instructions.

ADVANTAGES

- Prevents short circuits caused by birds and other forest animals.
- Protects wildlife
- Easy to attach
- Light weight and durable

TECHNICAL PROPERTIES

Structure

- Plastic (polypropylene)

Temperature range

- 40°C... +100°C

ENVIRONMENTAL RESISTANCE

- Weather-resistant
- Wear-resistant

INSTALLATION

For the high voltage terminal of the transformer:

The Teknikum® Bird guard is used to protect the pole transformer's high voltage connector from short circuits caused by birds and other forest animals.

The guard is attached to the upper flange of the high voltage penetration of the transformer and is tightened firmly with the included cable tie. The excess part of the bundle is cut off.

For surge protector (ABB MWK):

The protector can also be attached to ABB MWK type surge protectors.

In this case, two opposite overhanging parts are cut from the bird guard above the fastening groove. The cut parts are turned inwards on the flange of the surge protector.

The protection is tightened with the help of the four protrusions on the edge of the flange and the bundle tie, and the cut parts ensure that blows from above do not detach the bird protection from the surge protector.

Note: Do not cut the projections with the fastening loops for the cable tie.

RECYCLING

Recycle damaged products according to PP code.

MANUFACTURER

Teknikum Oy (Business ID FI07645274),
