

Teknikum® TITAN™ Reducer

APPLICATIONS

Teknikum TITAN™ Reducers make it possible to connect hoses and pipes of different diameters. Flexible reducer compensates vertical and horizontal movements in pipelines and damps vibrations. Reducer is at its best e.g. when connecting a pump with a steel pipeline.

The standard reducers use rubber flanges and steel support flanges. Available also with other connector systems according to the applications and conditions. Please check the suitable couplings and flanges options below.

Available in a wide range of customized dimensions and rubber materials (NR, SBR, NBR or EPDM rubber) and for extremely abrasive solutions with CERAMIC inner lining* (*only with PLUS™ connection).

NR rubber hose has antistatic properties, providing electrical conductivity and increased safety against ESD.

Teknikum TITAN™ reducer material versions: EPDM (chemical resistant) or NBR (oil resistant) rubber materials.

ADVANTAGES

- Safe and durable connection for material handling
- Excellent resistance to abrasion and weather
- Eliminates vibrations and noise
- ESD protection with Antistatic version
- EPDM and NBR material options
- Quick and easy installation
- Optionally with PLUS™ flanges

TECHNICAL PROPERTIES

Structure

- Tube: black NR 45 ShA
 - smooth
 - wear resistant
 - antistatic
- Reinforcement
 - textile
- Cover: black SBR 60 ShA
 - wear and weather resistant
 - antistatic
- Burst safety factor 2 x working press.

Temperature range

- NR / SBR -40°C - +80°C.
- NBR -40°C - +90°C.
- EPDM -40°C - +100°C.

Electrical properties

Teknikum TITAN™ reducer (NR):

- Conductive cover $R \leq 10^6 \Omega$ / length
- Conductive through the hose wall $R \leq 10^9 \Omega$

SUITABLE COUPLINGS AND FLANGES

Standard hose is made with Teknikum® Flange connection. Supporting flanges or drilling are not included in product prices.

See connecting versions details in:

- **Teknikum® Flange** datasheet.
- **Teknikum® PLUS™ flange** datasheet.

Optionally we recommend Teknikum PLUS™ flange system.
